## Subject: Strange Win7 issue with large fonts...
Posted by mirek on Mon, 01 Mar 2010 10:20:03 GMT

When Win7 is set to "Large" fonts (which are really really large, so perhaps this is not much of problem as this setting is quite unusual), weird thing happens to U++ apps - they look like they are actually painted in lower resolution and then scaled up (means text is somewhat blurry).

Any clue as to why this happens is appreciated...
