Sorry, it is just a bug in the example.

Replace UWord constructor with this one:

```
UWord::UWord()
{
    AddFrame(menuBar);
    AddFrame(TopSeparatorFrame());
    AddFrame(toolbar);
    AddFrame(statusbar);
    Add(editor.SizePos());
    menuBar.Set THISBACK(MainMenu);
    Sizeable().Zoomable();
    WhenClose = THISBACK(Destroy);
    menuBar.WhenHelp = toolbar.WhenHelp = statusbar;
    static int doc;
    Title(Format("Document%d", ++doc));
    Icon(CtrlImg::File());
    editor.ClearModify();
    SetBar();
    editor.WhenRefreshBar = THISBACK(SetBar);
    OpenMain();
    ActiveFocus(editor);
}
```

(one line deleted) and it should work.

(The fix is committed to svn too).

Mirek
