It would be good to get this implemented in upp.
Maybe
If win ports = COM7, COM8, ...

If unix ports = /dev/ttyS7, /dev/ttyS8, ...

As posted on 26, January I have used serial ports extensively on Win. Getting something that is cross platform would be great.

Getting rid of the requirement for:
using namespace System::IO::Ports;
and using something that works on Win and Linux.

All the parsing, etc. is no problem.
