I was too optimistic... it does not work   ,

Is it possible to have a simple example of file upload by using the HttpClient? I need to simulate
the file upload by a web form like this

```
<html>
   <head></head>
   <body>
      <form enctype="multipart/form-data" action="uploader.php" method="POST">
 <input type="hidden" name="MAX_FILE_SIZE" value="100000" />
 Choose file: <input name="uploadedfile" type="file" /><br />
 <input type="submit" value="Upload File" />
 </form>
   </body>
</html>
```

If it is not possible I'll use the Ftp client.
Thank you very much in advance,
Luigi
