Hi Reini,

have you tried the Makefile provided here:

<http://www.ultimatepp.org/forum/index.php?t=msg&th=4942&start=0>
?

If you have GNU make available on OSX, you could try it since it could be the base for a general U++ Makefile.

Honza is also working on a version providing better package *.upp file parsing enhances my version quite a lot.

But the Makefile I provided should work for building TheIDE as is.

Matthias
