Reset works fine. I wrote about this column problem many times here (this means I have to redesign it as it's not intuitive).
Just put all your AddColumns between following method calls:

grid.Ready(false);
grid.AddColumn(...);
grid.AddColumn(...);
grid.Ready(true);

This display mess happens only in proportional mode and only if grid is visible on the screen. It is so because each AddColumn recalculates columns proportions being not aware of next AddColumn calls. I'll put this issue on my todo list.
