I've noticed that if DropList has any SubButtons and it's parent control is disabled, it's buttons still look enabled. I tried adding these lines to public section of DropList, but it didn't help:
 void   Enable (bool enable = true)   {for(int i=0;i<GetButtonCount();++i)
GetButton(i).Enable(enable); Ctrl::Enable(enable);}
 void   Disable()   {Enable(false);}
