Maybe refresh method of Ctrl work?

If you want to re-enable drop list the the state of ctrls need to change to initial state!

Mindtraveller wrote on Fri, 19 March 2010 21:37 I've noticed that if DropList has any SubButtons and it's parent control is disabled, it's buttons still look enabled. I tried adding these lines to public section of DropList, but it didn't help:

```
void    Enable (bool enable = true)    {for(int i=0;i<GetButtonCount();++i)
GetButton(i).Enable(enable); Ctrl::Enable(enable);}
void    Disable()                      {Enable(false);}
```
