Mindtraveller wrote on Sun, 21 March 2010 08:17AFAIR Web package and HttpClient class
supports Proxy. Just look at it's methods closer.
Hello Mindtraveller

Is perhaps the key here? (httpcli.cpp)

```
 if(use_proxy && !IsNull(proxy_username))
   request << "Proxy-Authorization: basic " << Base64Encode(proxy_username + ':' +
proxy_password) << "\r\n";
 if(!IsNull(digest))
  request << "Authorization: Digest " << digest << "\r\n";
 else if(!force_digest && (!IsNull(username) || !IsNull(password)))
  request << "Authorization: basic " << Base64Encode(username + ":" + password) << "\r\n";
```

Does in anyway the code would run something like this? (I do not have any idea)

```
request << "Proxy-Authorization: NTLM " << Base64Encode(proxy_username + ':' +
proxy_password) << "\r\n";
```
