With STermPro you can

- \* Control serial device with parameters, not bytes. Just select protocol. STermPro takes care of the rest.
- \* Check device output as parameters of protocol, not just a sequence of bytes.
- \* Send and receive with many serial ports simultaneously. Each port has it's tab.
- \* Send mixed strings with hex characters. Analyze clearly arranged messages.
- \* Unique serial port flow visualization makes it clear at once.
- \* Work with custom serial devices.

STermPro website

U++ rule!
