With STermPro you can

   * Control serial device with parameters, not bytes. Just select protocol. STermPro takes care of the rest.
  * Check device output as parameters of protocol, not just a sequence of bytes.

  * Send and receive with many serial ports simultaneously. Each port has it's tab.
  * Send mixed strings with hex characters. Analyze clearly arranged messages.
  * Unique serial port flow visualization makes it clear at once.
  * Work with custom serial devices.
