What is the status of U++ in Windows Mobile?

Around 2004, I have succeeded to compile some examples and to run them on my WinCE handheld computer.

Then it became unmaintained. I would say it would require about week to get it working again.

I was basically stopped at lack of available free compiler.

If somebody could get CeGCC working in Win32 and suggest some decent setup (emulator etc.), I could try again.

One problem, though, is that I do not own any WinCE HW anymore...

Hello Mirek

I have a Pocket PC 2003 PDA (still running).

Free eMbedded Visual C++ 4.0 SP4 supports until Windows CE 5.0 that I think it is similar to Windows Mobile 5. Actual version is 6.5.
