
Subject: strange chars in Calc panel

Hi,

When I enter the expression "123+33" to the calc panel and press enter, the following gets printed:

\$123+33

156 0x9c " "n

The interesting part is the letter "n" at the end. This character in this line keeps changing to various strange glyphs while I enter other expressions into the lines below, or when deleting other chars.

Does not seem a serious problem, but I suspect that the bug is in the edit control or the String class itself. I have tried to find the bug by staring at the relevant code portions, but didn't find anything suspicious. I am using v2232 on Vista 64bit.

Cheers,
Sandor
