Subject: Re: strange chars in Calc panel
Posted by dolik.rce on Thu, 15 Apr 2010 05:51:41 GMT

I can confirm that. I was able to reproduce this bug (on Linux, with nogtk build of theide), but the strange glyphs appear only if I delete characters in result and then force repaint, for example by dragging some other window over the area of calculator or scrolling the line out of view and back. Clicking the problematic line removes the additional glyphs (until next repaint).
