CppBuilder::IncludesDefinesTargetTime()

```
Time t = GetSysTime();
cc << " -DbmYEAR=" << (int)t.year;
cc << " -DbmMONTH=" << (int)t.month;
cc << " -DbmDAY=" << (int)t.day;
cc << " -DbmHOUR=" << (int)t.hour;
cc << " -DbmMINUTE=" << (int)t.minute;
cc << " -DbmSECOND=" << (int)t.second;
```

What is role of these defines? When I use precompiled header, compiler produses warnings, that defines are changed.

Is it possible to remove them? For build date/time there are `__DATE__` and `__TIME__`.
