Actually... I find that if you resize the window the font(!) changes size with it. That is quite undesirable and quite peculiar... Can I turn that off? I don't set Zoomable() for the Layout, but that makes no difference.

Looking at the sources, Paint seems to call GetZoom, that just gets the rectangle of the widget, making me suspect I can not turn that off.

Yes, that is correct. Looks like I have misled you somewhat here... (I did not realize there will be this zooming problem...)

Anyway, perhaps it is the time to use ArrayCtrl as suggested?

In fact, even creating your own widget would not be that hard. Maybe it is even better option than trying to adapt something else (simple widgets development always was U++'s primary goal).
