Hi Koldo,

Very interesting idea. You are right that it works like this in forum now, but it would definitely lower the barrier for shy programmers.

nneilson wrote on Sun, 18 April 2010 22:07 That is a good idea but there will always be a time lag between a question and a response.

Actually the tutor and tutored person can make an agreement and meet on irc/icq/{whatever IM system}, let's say every two days for an hour or so. That would make the cooperation much faster then through the forum or mail.

nneilson wrote on Sun, 18 April 2010 22:07 Here are a few suggestions from a newbie:

Have another menu item to the right of "Setup" called "Help".

That is what most people are used to, having "Help" under "Assist" is a bit confusing.

Yes, this is true. Not having Help menu is like having no help at all. People are sometimes too lazy to hit F1 not even to mention to search for help in non-standard locations...

nneilson wrote on Sun, 18 April 2010 22:07 The "Manual" is good, being able to access that from "Help" and opened in a separate

window/browser even when offline. If that is a separate download the default location could be a subdirectory under MyApps.

You mean like having off-line html version of help? Topic++ contains the same info and you can have it in separate tab. But actually exporting html help would be really easy, basically just running upweb with few extra lines of code to exclude forum and ads...

But back to the tutoring: I like the idea and I would probably use it myself if it existed when I started to use U++. Count on my help as far as my skills go

Regards,
Honza
