Subject: iml file contents erased after compiling errors

Hello,

I have encountered several such situations. After a compiling error, contents in my iml file are all gone, and don't see a way to recover. Compiling errors are pointing to iml. So I am not sure whether empty iml file caused compiling failure, or other compiling errors caused erasing iml file contents.

BTW, what is left in the iml file is this text: PREMULTIPLIED.

Did any one see similar situations?

Thanks!
