I don't use DECLARE CURSOR and FECTH SQL statements, only simple SELECTS.

If you iterate on the result of a SELECT, it iterates on a table in RAM, AFAIK, so reconnection is not an issue here.

BTW, I changed PostgreSQLESession::Rollback() to:

```
void PostgreSQLESession::Rollback()
{
    ExecTrans("rollback");
    if(level>0) level--;
}
```

and my app is quite usable now on unstable networks.
