I have done that about 8 times, I even tried the uninstall/install.

I used "rm -r ~/.upp" if the ~ was to be replaced with the path I don't even know that is installed using PPA.

I had a glitch, there was an executable theide in /usr/bin, probably from the make install, I used sudo nautilus to get in and delete it. After a Synaptic install of upp a search for "theide" just shows up on /host/.
