hi mirek,

this is just a tidy up version of CoWork to current revision.

there have been some lines not needed / unreached..

one change is that Pool member functions are not static anymore..
i know this is a penalty for speed because of __thiscall, but it makes the separation cleaner.. so the static functions dont need to call pool() to get their instance. they already are part of one.

dont know, maybe its ok for you, otherwise drop it
