Hello all,

I propose to remove case sensitive of column type name.
I prepared a little patch for this:

```
Index: uppsrc/plugin/sqlite3/Sqlite3upp.cpp
===================================================================
--- uppsrc/plugin/sqlite3/Sqlite3upp.cpp (revision 2404)
+++ uppsrc/plugin/sqlite3/Sqlite3upp.cpp (working copy)
@@ -245,7 +245,8 @@
  }

  ASSERT(got_row_data);
- String coltype = sqlite3_column_decltype(current_stmt,i);
+ // Remove case sensitive
+ String coltype = ToLower(sqlite3_column_decltype(current_stmt,i));
  switch (sqlite3_column_type(current_stmt,i)) {
   case SQLITE_INTEGER:
    f = sqlite3_column_int64(current_stmt,i);
```

It is useful when I create a table
"CREATE TABLE Tab1(col1 DATETIME)".
When i execute a select statement, the conversion in Time is not correct.
