1. mydocedit << "text"; - No. At least in the version I have.
To check if a Ctrl has that kind of ability you should check ("Search in files" CtrlLib "operator<<")if its class declaration has something like
 void operator<<=(const String& s)   { Set(s); }
If not:
a) make your own derived class and put the above line inside;
b) ask Mirek to add this feature.
