You can use normal Chameleon themeing methods, but the header style is shared between HeaderCtrl, ArrayCtrl and GridCtrl, so you need to create or edit a HeaderCtrl::Style.

```
HeaderCtrl::Style& s = HeaderCtrl::StyleDefault().Write();  
// use s
```

The easiest way to do that is to use SetTheme method:

```
grid.GetDisplay()->SetTheme(1);
```

There are 7 themes available now (see GridCtrl.img). If you want to modify theme as cbpporter suggested you have to call grid.Chameleon() first.
