Hello all!

I propose to change a little Label method from ToolButton class:

from:

```
ToolButton& Label(const char *text, int kind = ToolButton::RIGHTLABEL);
```

to:

```
ToolButton& Label(const char *text, int kind);
```

```
ToolButton& Label(const String &text) {Label(text, text.IsEmpty() ? ToolButton::NOLABEL : ((kind = ToolButton::NOLABEL)|| (kind = ToolButton::FORCE)) ? ToolButton::RIGHTLABEL : kind);}
```

In this case, when i set label, kind option will change and did not call sepparate method "ToolButton& Kind(int \_kind)"

and cpp file:

from:

```
ToolButton& ToolButton::Label(const char *text, int _kind)
{
    if(!_kind & FORCE) {
        kind = _kind;
        Refresh();
    }
    Text(text);
    return *this;
}
```

to:

```
ToolButton& ToolButton::Label(const char *text, int _kind)
{
    if(_kind!=kind) {
        kind = _kind;
        Refresh();
    }
    Text(text);
    return *this;
}
```
