fudadmin wrote on Sat, 22 April 2006 19:21The trick:

```
#define PACKAGEDIR <ForlanoVega1
```

doesn't work correctly with at least optimal modes and BLITZ.

Does anybody know the reason?

The mechanism for substitution of names within a `#include` statement is "implementation defined" and the usual guideline is to not do what you are doing, but to do something like

```
#define SF <dir/file.h>
```

```
#include SF
```

where the text that follows the `#include` is a single name, the name of a macro.

Graeme
