fudadmin wrote on Sat, 22 April 2006 19:21The trick:
#define PACKAGEDIR <ForlanoVega1
doesn't work correctly with at least optimal modes and BLITZ.
Does anybody know the reason?

The mechanism for substitution of names within a #include statement is "implementation defined"
and the usual guideline is to not do what you are doing, but to do something like

#define SF <dir/file.h>
#include SF

where the text that follows the #include is a single name, the name of a macro.
