I am sorry, U++ development recently might seem to be slowed down, however it is caused by huge refactoring of those Images - it takes a lot of time to get it right. I hope that it will be finished by the end of month, I hope there will be more visible changes later.

BTW, as a nice sideeffect of new Image, "core" GUI application size will be reduced by 200-400KB...

Mirek

There's no rush as far as I'm concerned. I just thought it worth expressing my opinion that the lack of organized help is a deterrent for quite a few people - just my opinion though. It seems I was the only one who got hung up on what "set main package" meant!

I notice you didn't include the code I posted for CopyWord and SwapChars. Do you accept enhancements to the source code at all? Suppose I wrote code to allow Esc macros to do copy/paste or have global variables - would it be accepted?
