Hello All,

I propose to add new future in docking visualization process like in Visual Studio. I like this realization and seems to be more intuitive!

The process like this:

1. On margins of the main window paints the dock icon options (seems to be in the image package)
2. In the middle of the window where mouse over paint all the docking options and tabbing.
3. When mouse over to a docking/tabbing option do not resize the controls but only paint the transparent blue window.

The image is attached:

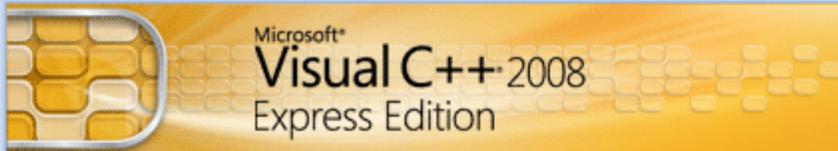

Thank you, Ion Lupascu (tojocky)
