mrjt wrote on Thu, 15 July 2010 15:38- I cannot reproduce the bug. Are you sure the bug wasn't caused by serializing (loading) from a file saved with a different configuration?

- The variable tabcont is a Ptr<DockCont> and Ptr<>s initialise themselves to NULL on creation, so I cannot see how that could be the solution to the problem.

The problem is with destructor. When I close the application then it tries to delete null pointer and prompts "access violation"!

P.S. I didn't load from a file saved with a different configuration.
