Subject: TabBar: ConextMenu(false) feature
Posted by kohait00 on Wed, 21 Jul 2010 08:54:19 GMT

hi folks,

sometimes its nessesary to disable user's interferences in controls. TabBar is an example for it. a user can kick its elements with close.., but when they have been added in code your out..
so here comes an added property.

ContextMenu(bool v = true);
true by default so no one ever sees the change, but if desired, can disble the whole context menu.

if thats ok and no claims appear the owner can commit , or i will commit in the next days..
