I agree with prof at least for one term: look&feel.

Upp is designed to be portable, but has a Windows look&feel. I know this will be improved in the future, but for now, I beleave this's one of the reasons to make Ultimate++ unpopular.

Another reason could be it's particular design (like the foundations of NTL). Even if it seems to be a pleasure for certain persons, it way be a non sense for others ?

Look&feel is the most uninimportant thing. The most commercial programs are for Windows. Linux with X.org is just for kids at its current state.

Bah, you have just tried the wrong distro

We will also need look&feel adjustments on Win too (think Vista if not theming...)
