i changed things for Add semantic, take a look at it. it was no much work. maybe mirek has had something special in mind with void return.. i'll ask him.

another thing to be changed is maybe the void Set(int i, const T& x, int count = 1); behaviour. which also could be split up just like Insert..

EDIT: no one has downloaded previous version, so i just change it for one, where Insert and Set behaviour is already changed accordingly. please review it. maybe it can go upstream if nothing stands in way.
