Subject: [SUCCESS] Struggle with Serial port class

I have downloaded a serial port class from message 25665 by nixnixnix from this thread
http://www.ultimatepp.org/forum/index.php?t=msg&goto=13434&&srch=serial+class#msg_13434

Being totally new to C++ and UPP coding, I'd like some help to make the attached project work. The least I need to do is to poll the serial port during the lifetime of the program so that I can display those characters on the docedit box. I may possibly need to do a timedcallback to check for characters or better still event driven receiver.

I'd appreciate any pointers or guidance you can provide.

Thank You
Jerson
