Hello, I am having problems figuring out the proper method for doing the cell joins. What I want in the end is a 2 row header and table that looks like this:

```
+-----+-----+-----+
|   |   Mode   |   Band   |
| Need +-----+-----+
|   | P|L|E|Q|P|L|E|Q|
+-----+-----+-----+
| ITU Z |Y|W|C| |N|Y|Y|Y|
| CQ Z  |Y|W|C| |N|Y|Y|Y|
| State | |Y|W|N|N|Y|Y|Y|
+-----+-----+-----+
```

Need, Mode, Band being major headers and the P,L,E,Q's being minor headers under the grouping of Mode and Band.

Right now I am working on just making the Needs and Band header setup work. I have something like this:

```
needs.AddColumn("Need");
needs.AddColumn("Band");
needs.AddColumn("bp");
needs.AddColumn("bl");
needs.AddColumn("be");
needs.AddColumn("bq");
needs.AddRow("", "P", "L", "E", "Q");
needs.SetFixedRows(2);
needs.JoinFixedCells(0,0,1,1); // Needs span 1 row
```

but anything I try with the next step just messes things all up. I guess I am not understanding the parameters:

```
int left, int top, int right, int bottom
```

I would assume that I would use:

```
.JoinFixedCells(1, 0, 4, 0);
```

to make the Column on the left (1), row (0), span to the right to column (4), row (0).

Any thoughts on what I am doing wrong?

Jeremy
