I've spent quite some time looking at the alignment issue. I think there were a lot of issues with the drawing placement in the original SliderCtrl code, but no one could notice because there were no ticks or numbers. Anyway, I have fixed this up significantly, and cleaned up more of the SliderCtrl code in general.

You need to use:

```
slider.SetTickPosition( SliderCtrl::BOTTOM );
```

AutoSize would be nice.

Can you point me to some information on USC files? What do I need to do?

Anthony
