Try this out:

```
#include <CtrlLib/CtrlLib.h>
using namespace Upp;

struct Example : TopWindow {
    typedef Example CLASSNAME;
    WithDropChoice<EditString> item;
    Example() {
        SetRect(0,0,200,32);Title("Feel the difference");
        item.AddList(AttrText("one").SetFont(Monospace()));
        item.AddList(AttrText("two").SetFont(Monospace()));
        item.AddList(AttrText("three").SetFont(Monospace()));
        item.AddList("1");
        item.AddList("2");
        item.AddList("3");
        item.SetText("zero");
        item.HSizePosZ(8, 8).TopPosZ(8, 19);
        Add(item);
    }
};

GUI_APP_MAIN {
    Example().Run();
}
```

The question is what should I write to force this work?
