I analyzed DefaultLanguageCompare and this function can recognize the number even if it was passed as a string. So when comparing numbers 123 > 3. I know this is incorrect from developer point of view but for user 123 and 3 are numbers not strings. And I think this is correct behavior. As for second case I cannot reproduce it. The order is correct. In grid I can see "Albert", "Albert Aaaaaaaaaaaaaaaaaaaaaa", "Albert Zbiven"
