Well indeed, I don't know c++ very well , I chose U++ because it looked better than GTK+ QT+..... I mean, it looked easier and more logical. I've only used fltk before, but it's ugly, and the layout is fixed (however, it really simple to use).

I'll use theide for the moment, but why aren't there some kind of `fltk2-config --cflags --libs` ???
(maybe this is a beginner question)
