I just want to show a video animation in my application and don't know how to do.

Thank you

Ratah

Hello Ratah

If you work in Windows there is a class in Controls4U called VLCPlayer that is a VLC player embedded in a control.

If you need it in Linux I am preparing a multi platform player to be released in some months.

If you are in a hurry tell me your exact needs and I will try to upload something in advance.
