Hello!

I have a problem with installation from PPA on "clean" computer.

theide and upp installed, but configuration files did not appear after installation or first start.
No templates, no MyApps/...

If old version installed by "make install", all ok.

If i had no upp/theide earlier, i need run

```
mkdir ~/upp.out
mkdir ~/MyApps
```

```
mkdir ~/.upp
mkdir ~/.upp/theide
```

```
cp GCC.bm ~/.upp/theide
```

```
echo UPP = \"/usr/share/upp/upsrcl\";OUTPUT = \"$HOME/upp.out\"; > ~/.upp/theide/upsrcl.var
echo UPP = \"/usr/share/upp/examples\:/usr/share/upp/upsrcl\";OUTPUT = \"$HOME/upp.out\";
> ~/.upp/theide/examples.var
echo UPP = \"/usr/share/upp/reference\:/usr/share/upp/upsrcl\";OUTPUT = \"$HOME/upp.out\";
> ~/.upp/theide/reference.var
echo UPP = \"/usr/share/upp/tutorial\:/usr/share/upp/upsrcl\";OUTPUT = \"$HOME/upp.out\"; >
~/.upp/theide/tutorial.var
echo UPP = \"/usr/share/upp/bazaar\:/usr/share/upp/upsrcl\";OUTPUT = \"$HOME/upp.out\"; >
~/.upp/theide/bazaar.var
echo UPP = \"$HOME/MyApps\:/usr/share/upp/upsrcl\";OUTPUT = \"$HOME/upp.out\"; >
~/.upp/theide/MyApps.var
```

manually for each user...

Can APT create config files automatically,
or can you include necessary steps in manual?

OS: Ubuntu 8.04
