yes, absolutely.

this was a quick shot, i needed it for my app, delivering some additional ressource files, which should be 'scrambled' for small files it works with no issues, i just wanted to try it with larger files ofcourse.

i am not very familiar with the Stream stuff in upp yet, but definitely need to..

meanwhile, i dont mind anyone to change the behaviour accordingly, this could, infact, be a true life example of how to do streaming processing with AESStream..if you already know what to change, feel free to do so i might do it as soon as i have some more info on that and some more time.. like always.

cheers
