Hi camphene,

The ppa installation still has some rough edges, as you noticed. I am currently working on smoothing the process and filling in gaps like this.

You already found the solution, but just for completeness: you can create the repositories also when starting the ide. Right clicking on the left pane of the "Select main package" dialog let's you create the repository, just fill in the paths and you are ready to go.

Thank you for for using the PPA

Best regards,
Honza
