---

it was meant like that, this page claims no copyright, it is BSD licence...

anyone who has more details on that please add to this..all together is welcome to go into an info page about Stream.

often in upp, i found that, despite of a clear interface description, i could not properly use the class, because i didnt know the 'preassumptions' taken while conception of class. it's the missing big picture, i've often spoken about in other threads, that makes usage of upp classes sometimes sticky. though, it invites one to dig into code... but rookies like i am could learn quite a lot from conceptional preassumptions from profs

so any contributions gladly welcome
