Subject: ColumnList question (move and delete item)

Hello,

I had to show data vertically (just one column), then change their relative position and remove when necessary. Instead to use the arrayctrl I wanted to experiment the ColumnList believing that was more appropriate. Now that everything is ready I can't find a method to remove the item and permit their relative motion.
Is there a solution or I must come back to the arraycrtl?

Thank you,
Luigi
