kohait00 wrote on Fri, 13 August 2010 04:23another proposal, maybe this one's better...

```
 const byte * Peek(int size = 1)  { if(size <= 0) return NULL; if(ptr + size <= rdlim) return ptr; return NULL; }
 byte *    Head(int size = 1)    { if(size <= 0) return NULL; if(ptr + size <= wrlim) return ptr; return NULL; }
```

For some reasons, write variant sounds somewhat dangerous to me...

Have to think about this one...

Well, in any case, it should advance the ptr...
