jeremy_c wrote on Sat, 14 August 2010 21:19Is JavaScriptCore looking to replace ESC? I'm writing an app now that allows the user to perform certain tasks using ESC.

JavaScript is known by a lot more people than ESC, although it's very easy to pickup on. I would imagine, though, that JavaScript is faster and contains a much larger standard library.

Jeremy Hi Jeremy,

I wouldn't say replace. I believe they will live together side by side It is up to you which language you choose. I for example prefer ESC in most cases, especially for it's small size and because you can easily interact with the functions and variables from u++ code. On the other hand, as you say, JavaScript is generally known, and even though ESC syntax is easy, it takes few minutes to learn.

So it is up to you and your needs.
