I have fixed the 50 ToUpper codes.

Yet, there are still 8 codes that are wrong. I can not fit the correct value in 11 bits. I need at least 14 bits for these 8 values, and maybe more for other codes.

I'll postpone the upload of fixes to ToLower until we see how we'll proceed with these 8 codes. I propose that we use two tables. One with 2048 1 byte values that encode only properties. Another with a dword for lower/upper variants. Maybe we can optimize the storage a little. Anyway, 2KiB extra RAM is not that much.
