Subject: Re: TabCtrl (or equivalen) with tabs on left side
Posted by kohait00 on Tue, 17 Aug 2010 16:17:03 GMT

sorry, forgot to add one line in the post

```
//set a different align for all 4 TabBar's
 for (int i = 0; i < 4; i++)
  bar[i].SetAlign((i+1) % 4);
//add only the first to main application window, the others on demand
 AddFrame(bar[0]);
```

you add the TabBars as Frames to your main application Ctrl (or whereever you need them)
