Subject: HelpViewer Class

I've added a small HelpViewer class, which allows to vie Topic pages with a Table Of Contents (TOC) tree on left side.
The TOC is simply a Topic page formatted with tab indents which represents the TOC indenting levels.
Example :

Argument 1
<TAB>Sub 1.1
<TAB>Sub 1.2
<TAB><TAB>Sub 1.2.1
<TAB><TAB>Sub 1.2.2
<TAB>Sub 1.3
Argument 2
Argument 3
<TAB>Sub 3.1
.....

TOC formatting is unimportant, only the links and text parts are loaded into a TreeCtrl.
Class could be easily extended to handle images inside the TOC.

I added also a TestHelpViewer package that shows the usage; it loads a TOC into control (twice, to show that the control can load multiple help files at once).

The class is still missing a couple of cosmetics, but it's very usable.

Ciao

Max
